(National Pollutant Discharge Elimination System Permit)

for the

**LINCOLN CENTER ENVIRONMENTAL REMEDIATION TRUST
GROUNDWATER TREATMENT SYSTEM
SAN JOAQUIN COUNTY**

As part of a settlement of legal proceedings in the United States District Court, Eastern District of California, the Lincoln Center Environmental Remediation Trust (Discharger) was created to manage environmental remediation activities at the Lincoln Center Site in the city of Stockton, San Joaquin County, California. The Discharger owns and operates a ground water extraction and treatment system to remove volatile organic compounds (VOCs), petroleum products, and lead from ground water. The treatment system is designed for a flow of 0.43 million gallons per day (mgd) of extracted groundwater, and operates at an average flow of 0.25 mgd. Effluent from the treatment unit is discharged to the storm sewer system that is owned and operated by San Joaquin County. The storm sewer system discharges to the Fourteen Mile Slough. Fourteen Mile Slough is part of the Sacramento-San Joaquin Delta (Delta), and both are waters of the United States. This proposed Order includes new effluent limitations. Immediate compliance with the new effluent limitations for arsenic, specific conductance, barium, iron, manganese, and ammonia is not possible or practicable. This proposed Order includes a companion Time Schedule Order which provides a time schedule for the Discharger to develop, submit, and implement methods to optimize this remediation system to cleanup the groundwater faster and more efficiently, and/or reduce the volume of treated groundwater and find alternative means of disposal or reclamation within the life of the permit term, or construct necessary treatment facilities to meet these new effluent limitations.
